Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 4-13 are allowed.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 14 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Beausoleil (6,173,532).

Beausoleil teaches an openable-panel, of a land motor vehicle, said control system allowing a user to act remotely on a panel opening actuator mechanism secured to the openable-panel in the vehicle for controlling at least one action of the actuator mechanism, as a function of the displacement of an object, in a delimited control zone adjoining the openable-panel, said displacement being determined on the basis of the signals supplied by at least one motion sensor, of a motion detection signals transmitter/receiver type, which the system comprises and which is intended to be placed on or in proximity to the openable-panel, a radiation pattern of each of the sensors being fixed in such a way as to delimit a control zone in the vicinity of the openable-panel (column 1, lines 10-25, column). Beausoleil does not teach said control system comprising a means, mounted on the vehicle. However, it would have been obvious to one skill in the art

Art Unit: 2144

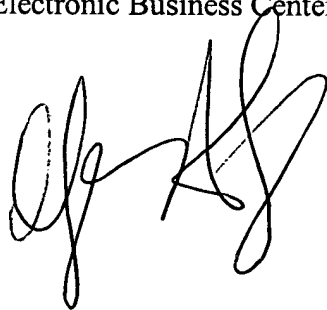

that the omission of an element and its function in a combination where the remaining elements perform the same functions involves only routine skill in the art. In re Karlson, 136 USPQ 184.
